

Selenium Java + TestNG Automation Framework

This project is a sample Selenium test automation framework using Python and PyTest.

Key Highlights:

- Uses pytest fixtures for clean setup and teardown.
- Implements the Page Object Model for reusability.
- Contains a test case to validate login functionality.

Tools & Technologies Used:

- Python 3.8+
- Selenium WebDriver
- PyTest
- VS Code / PyCharm

Files Included:

- conftest.py
- login_page.py
- test_login.py

This project is ideal for demonstrating your Python automation testing expertise in freelance job applications.
